

PLEASE FOLLOW THE INSTRUCTIONS BELOW TO CONNECT WITH YOUR DOCTOR FOR YOUR SCHEDULED TELEHEALTH VISIT.

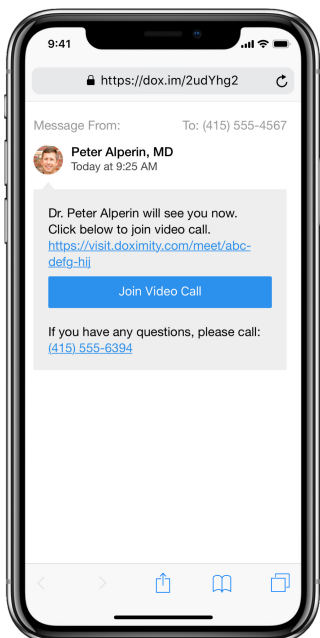

1 You will receive a text from an 882-86 short phone number inviting them to the video call

If you try to call or text the 882-86 short phone number back, you will receive an error message indicating that it is not a reachable number and doesn't accept incoming text messages.

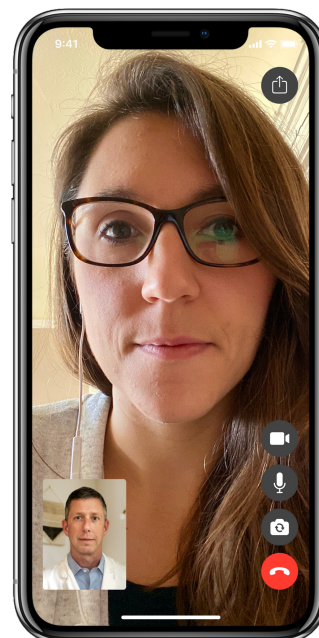

2 You will have to give consent to receiving messages

When you tap the link in the text, you will be brought to a screen asking you to consent to receive text messages from the doctor initiating the telehealth visit. You will only be asked for consent once.

3 You will see a secure message from your doctor with a link to join the video call

If this is the first time you have joined a video call with your doctor using Doximity, you will need to accept permissions for microphone and camera.

4 You will be brought into the video call room

Once you tap the 'Join Video Call' button in the secure message you will be brought into the call room with your doctor.

The video call room will load in your mobile web browser (no other app installation needed).

We are looking forward to connecting with you for a telehealth visit. Please print out the attached Snellen acuity chart to test your vision for our visit. Please follow the instructions below.

What You Need to Test Your Vision at Home

- Something to cover the eye, like a paper cup or facial tissue.
- Scissors.
- Tape or tack to hang the test chart on the wall.
- A pencil or pen to record the results.
- A yardstick, tape measure, or ruler.
- A flashlight, if available.
- A well-lighted room at least 10 feet long.
- The correct testing chart.

Prepare the Test Area

- Select either the child's or adult's test chart and print it out.
 - When printed, the largest letter at the top of the chart should be just under an inch (23 millimeters) tall.
- Measure 10 feet from a wall with no windows, and place a chair at this point.
- Tape or pin the chart on the bare wall, level with the eyes of the person you will test as he or she sits in the chair.

Testing an Adult or Older Child

- Have the person being tested sit in the chair, 10 feet from the chart. Make sure the chart is level with his or her eyes.
- Have the person being tested cover one eye. If he or she uses eyeglasses for distance vision, the glasses should be worn during the test.
- Shine the flashlight on each line of the chart, while the person you are testing reads the letters out loud. Continue to the bottom row or until the letters are too difficult for the person to see.
- Write down the number of the smallest line seen correctly (the line with more than half of the letters correctly identified).
- Now repeat the test with the other eye covered and record the results.

Home Vision Test Results

Record the results of your home screening by filling in the number of the smallest line the person could read for each line below.
